

Artificial Intelligence Fundamentals

StatSkill AI • Learning Material

What is AI?

This section explains what is ai? using simple definitions, practical examples and learning-focused guidance. Understand the concept first, then apply it in a small exercise before moving forward.

Machine Learning

This section explains machine learning using simple definitions, practical examples and learning-focused guidance. Understand the concept first, then apply it in a small exercise before moving forward.

Supervised and Unsupervised Learning

This section explains supervised and unsupervised learning using simple definitions, practical examples and learning-focused guidance. Understand the concept first, then apply it in a small exercise before moving forward.

AI Applications

This section explains ai applications using simple definitions, practical examples and learning-focused guidance. Understand the concept first, then apply it in a small exercise before moving forward.

Generative AI

This section explains generative ai using simple definitions, practical examples and learning-focused guidance. Understand the concept first, then apply it in a small exercise before moving forward.

Limitations

This section explains limitations using simple definitions, practical examples and learning-focused guidance. Understand the concept first, then apply it in a small exercise before moving forward.

Responsible AI

This section explains responsible ai using simple definitions, practical examples and learning-focused guidance. Understand the concept first, then apply it in a small exercise before moving forward.

Practice: classify three AI use cases.

This section explains practice: classify three ai use cases. using simple definitions, practical examples and learning-focused guidance. Understand the concept first, then apply it in a small exercise before moving forward.
