

Data Structures and Algorithms Notes

StatSkill AI • Learning Material

Data Structures

This section explains data structures using simple definitions, practical examples and learning-focused guidance. Understand the concept first, then apply it in a small exercise before moving forward.

Arrays and Strings

This section explains arrays and strings using simple definitions, practical examples and learning-focused guidance. Understand the concept first, then apply it in a small exercise before moving forward.

Linked Lists

This section explains linked lists using simple definitions, practical examples and learning-focused guidance. Understand the concept first, then apply it in a small exercise before moving forward.

Stacks and Queues

This section explains stacks and queues using simple definitions, practical examples and learning-focused guidance. Understand the concept first, then apply it in a small exercise before moving forward.

Searching

This section explains searching using simple definitions, practical examples and learning-focused guidance. Understand the concept first, then apply it in a small exercise before moving forward.

Sorting

This section explains sorting using simple definitions, practical examples and learning-focused guidance. Understand the concept first, then apply it in a small exercise before moving forward.

Time Complexity

This section explains time complexity using simple definitions, practical examples and learning-focused guidance. Understand the concept first, then apply it in a small exercise before moving forward.

Practice: explain when binary search can be used.

This section explains practice: explain when binary search can be used. using simple definitions, practical examples and learning-focused guidance. Understand the concept first, then apply it in a small exercise before moving forward.
