

Machine Learning Fundamentals

StatSkill AI • Learning Material

ML Workflow

This section explains ml workflow using simple definitions, practical examples and learning-focused guidance. Understand the concept first, then apply it in a small exercise before moving forward.

Features and Labels

This section explains features and labels using simple definitions, practical examples and learning-focused guidance. Understand the concept first, then apply it in a small exercise before moving forward.

Training and Testing

This section explains training and testing using simple definitions, practical examples and learning-focused guidance. Understand the concept first, then apply it in a small exercise before moving forward.

Regression

This section explains regression using simple definitions, practical examples and learning-focused guidance. Understand the concept first, then apply it in a small exercise before moving forward.

Classification

This section explains classification using simple definitions, practical examples and learning-focused guidance. Understand the concept first, then apply it in a small exercise before moving forward.

Evaluation

This section explains evaluation using simple definitions, practical examples and learning-focused guidance. Understand the concept first, then apply it in a small exercise before moving forward.

Overfitting

This section explains overfitting using simple definitions, practical examples and learning-focused guidance. Understand the concept first, then apply it in a small exercise before moving forward.

Practice: explain why test data should be unseen during training.

This section explains practice: explain why test data should be unseen during training. using simple definitions, practical examples and learning-focused guidance. Understand the concept first, then apply it in a small exercise before moving forward.
