

MongoDB and NoSQL Reference

StatSkill AI • Learning Material

NoSQL Concepts

This section explains nosql concepts using simple definitions, practical examples and learning-focused guidance. Understand the concept first, then apply it in a small exercise before moving forward.

Collections and Documents

This section explains collections and documents using simple definitions, practical examples and learning-focused guidance. Understand the concept first, then apply it in a small exercise before moving forward.

CRUD

This section explains crud using simple definitions, practical examples and learning-focused guidance. Understand the concept first, then apply it in a small exercise before moving forward.

Queries

This section explains queries using simple definitions, practical examples and learning-focused guidance. Understand the concept first, then apply it in a small exercise before moving forward.

Indexes

This section explains indexes using simple definitions, practical examples and learning-focused guidance. Understand the concept first, then apply it in a small exercise before moving forward.

Data Modelling

This section explains data modelling using simple definitions, practical examples and learning-focused guidance. Understand the concept first, then apply it in a small exercise before moving forward.

MongoDB vs SQL

This section explains mongodb vs sql using simple definitions, practical examples and learning-focused guidance. Understand the concept first, then apply it in a small exercise before moving forward.

Practice: design a users collection.

This section explains practice: design a users collection. using simple definitions, practical examples and learning-focused guidance. Understand the concept first, then apply it in a small exercise before moving forward.
