

Python for Data Analysis

StatSkill AI • Learning Material

Python for Analysis

This section explains python for analysis using simple definitions, practical examples and learning-focused guidance. Understand the concept first, then apply it in a small exercise before moving forward.

NumPy

This section explains numpy using simple definitions, practical examples and learning-focused guidance. Understand the concept first, then apply it in a small exercise before moving forward.

Pandas Series

This section explains pandas series using simple definitions, practical examples and learning-focused guidance. Understand the concept first, then apply it in a small exercise before moving forward.

DataFrames

This section explains dataframes using simple definitions, practical examples and learning-focused guidance. Understand the concept first, then apply it in a small exercise before moving forward.

Filtering

This section explains filtering using simple definitions, practical examples and learning-focused guidance. Understand the concept first, then apply it in a small exercise before moving forward.

Missing Values

This section explains missing values using simple definitions, practical examples and learning-focused guidance. Understand the concept first, then apply it in a small exercise before moving forward.

Grouping

This section explains grouping using simple definitions, practical examples and learning-focused guidance. Understand the concept first, then apply it in a small exercise before moving forward.

Practice: calculate average salary by department with Pandas.

This section explains practice: calculate average salary by department with pandas. using simple definitions, practical examples and learning-focused guidance. Understand the concept first, then apply it in a small exercise before moving forward.
